

Relationships and Survival (Extra Credit)

One of the key factors of survival is Relationships. An organism's survival can be positively or negatively influenced by the relationships it has with other organisms even if they are the same species.

(40 pts) Use the following link to define and give an example of the following types of relationships

<http://wizznotes.com/biology/symbiosis/symbiosis-mutualism-commensalism-and-parasitism>

Relationship	Definition	Example (use the internet)
Symbiosis		
Mutualism		
Commensalism		
Parasitism		

Due to the advance intelligence and the tools the human species rarely face a threat greater than ourselves and on the flipside one of our greatest sources of support is also ourselves given the right relationship. Watch the following video 'Can We Autocorrect Humanity?' and answer the following questions. (link also located under unit 5 of my weebly)

<http://www.bing.com/videos/search?q=can+we+auto+correct+humanity+video&view=detail&mid=2E711C60EA8F6D300AA42E711C60EA8F6D300AA4&FORM=VIRE>

- (10 pts) From the video and using the table above; identify which type of relationship is being influenced.
- (50 pts) Give a detailed, thoughtful and thorough explanation as to how this human behavior is positively or negatively influencing this type of relationship and how you think this affects us as a species. You may want to include you own personal experience as a source of observations. *(use the rest of this page and the back to write your thoughts)*
